By focusing on the body's biochemistry and finding which genetic mutations are affecting it, we can shut off the 'mal expression' of the gene and get individuals' systemic 'engines' running again.

Chronic unresolved medical issues? Many around Austin are talking about Dr. V. at Infinity Wellness Center and with good reason. Her passion and knowledge in the field of Epigenetics and her holistic functional approach are providing resolution in droves of unresolved cases locally, nationally, and internationally.

"Many seek us out as a last option, desperate for answers and desiring to regain their health and vitality. People come to us so ill, their bodies are in hibernation. By focusing on the body's biochemistry and finding which genetic mutations are affecting it, we can shut off the 'mal expression' of the gene and get individuals' systemic 'engines' running again."

Dr. V's insight and dedication to epigenetic work, along with Dr. Kendal Stewart's ongoing mentorship and Amy Yasko's teachings, allow Dr. Elena Villanueva, DC and her colleagues at Infinity Wellness Center to utilize this cutting edge approach, providing solutions for what was once unresolved.
